According to our (Global Info Research) latest study, the global Surgical Robot Servo Motor market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Servo motors are mainly arranged in the kinematic joints of robots. In surgical robots, DC motors are mainly used, which has the advantage of higher power; the encoder is installed on the output shaft of the motor and rotates synchronously with the motor, and transmits the signal to the driver while rotating. ; The driver judges whether the steering, speed, and position of the servo motor are correct according to the signal, and then performs correction and adjustment, and sends out a corresponding control current according to the command.
