Abstracts

The global Surgical Skin Grafting Dermatome market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Skin stretching is also known as external expansion and traction, that is, the normal skin on both sides of the wound edge is pulled toward the center by external force, and the skin's viscoelasticity and mechanical stretchability are used to generate 'extra' skin through linear load, thereby closing the soft tissue defect wound. The device that works on this technique is called a skin stretcher.
