Abstracts

The global Surround View Cameras market size is expected to reach \$ 12698 million by 2032, rising at a market growth of 13.2% CAGR during the forecast period (2026-2032).

In 2025, global Surround View Camera output reached about 115 million units and global capacity of around 180 million units. The average unit price is about USD 45, with gross margins near 28%. Surround View Cameras are multi-camera imaging systems installed around a vehicle to provide a synthesized top-down view of the vehicle and its surroundings, improving driver visibility during parking, low-speed maneuvering, and advanced driver assistance system (ADAS) functions. A typical system integrates four or more wide-angle cameras mounted at the front, rear, and side mirrors, whose video feeds are processed by an electronic control unit (ECU) or domain controller using image stitching algorithms and computer vision software to generate a seamless 360-degree view displayed on the vehicle's infotainment screen. The supply chain begins upstream with semiconductor and optical component suppliers providing CMOS image sensors, image signal processors (ISP), automotive SerDes chips, lenses, and camera modules (companies such as Sony Semiconductor Solutions, OmniVision Technologies, onsemi, and Samsung). Midstream includes automotive camera module manufacturers and Tier-1 automotive suppliers that integrate hardware and software into complete surround view systems (e.g., Magna International, Valeo, Bosch, Continental, Denso, and Aptiv). Downstream customers are automotive OEMs—including passenger vehicle and commercial vehicle manufacturers—that integrate surround view camera systems into ADAS and software-defined vehicle architectures for safety, parking assistance, and autonomous driving support.
