According to our (Global Info Research) latest study, the global Surveying Equipment market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Surveying is the technology of detecting the relative position of a point that is at the surface of the earth. There are different types of surveying techniques like geodetic surveys, cadastral surveys, engineering surveys, aerial surveys, mining surveys, and hydrographic surveys.

The rapid urbanization in emerging economies to be one of the major factors that will have a positive impact on the growth of the surveying instruments market in the coming years. With the increasing urban population across the world, the coming years will witness huge social, economic, and environmental transformations especially in the countries in Africa and Asia. It has been observed that though the people in these countries mostly live in rural areas, there will witness a considerable increase in urban populations in the next few years. This increased urbanization will consequently boost the demand for energy resources, transportations, and residential facilities and will in turn, augment the growth prospects of the surveying equipment market.
