Abstracts

According to our (Global Info Research) latest study, the global Suspended Accelerator Pedal market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The structure of the suspended accelerator pedal is hanging from the top, the pedal length is short, and it is not connected with the ground. The rotating shaft and fulcrum will be at the top of the whole device, and the structure will be simpler. The suspension accelerator pedal gives the driver a more light feeling, and the treading force is less. As long as you use your toes to make a little effort, you can step on it. Unlike the floor accelerator, you have to fit your feet with it to control it flexibly. The suspended accelerator pedal is often used in household cars or SUVs.
