Directed energy offers a transformational change in the defense industry to counter the disruptive & asymmetric threats while facing the increasingly sophisticated traditional challenge. High power microwaves offers capabilities in the anti-sensor application. Solid state lasers does promise of providing lighter and smaller system along with deep magazines .The growth of directed-energy and military laser market is highly reliant on the rising demand of military expenditure on laser based weapon system.

Continuously increasing demand for the high energy laser weapon system is acting as a major growth driver for the directed-energy and military laser market. Therefore, the advancement in the advanced beam control and fiber based spectral beam combination is also one of the key factor anticipated to catalyze the growing demand of directed-energy and military laser market during the forecast period. In addition, growing demand for the laser weapon system, radio frequencies and other types of directed energy technology for ground, air and sea platform is also anticipated to increase the demand of the directed-energy and military laser in the upcoming years. In turn this is also projected to affect the directed-energy and military laser market in a positive manner during the forecast period.

In spite of many driving factors, the directed-energy and military laser market is expected to show a shrink and fluctuation in growth rate because of it’s weakness against dust, water vapor and other obscurants. Lack of mobility is also acting as one of the major constraint for the directed-energy and military laser market. Mere transportability with considerable effort are also acting as restraining factor for the directed-energy and military laser market. Continuous growth from low power commercial laser to 30 kw & 60 kw laser system for military application is expected to

act as key opportunities for the directed-energy and military laser market.

Lasers are used in a variety of industries, including the defense, fusion energy, industrial, research and medical sectors. Military lasers, which have a higher degree of photon output and coherence, are present in material processing and auto assembly and are playing an increasingly important role in the development of many new processes, including guiding munitions and marking targets, missile defense systems, laser lightning displays, communication and surgical and diagnosis functions.

Growth over the next five years is projected to be robust and comes as demand grows by armed troops operating on land, air and water and as authorities look for crowd control weapons and to confront terrorists. The defense application laser market will see growth rates through 2022 of 11.5% annually, with the market value topping $4.8 billion, according to the report Directed-energy and Military Lasers: Global Markets. Medical uses of lasers will see double-digit growth through 2022, with the market valued at $2.3 billion.
