According to our (Global Info Research) latest study, the global Suspension For Airbags market size was valued at USD 734.7 million in 2022 and is forecast to a readjusted size of USD 1171.3 million by 2029 with a CAGR of 6.9% during review period.

Suspension For Airbags, which refers to the way in which sensor fusion can improve the interpretation of and response to environmental variables in self-driving cars, thereby making them safer.

Airbag suspensions were first widely used in the luxury car and SUV markets. Airbag suspensions are used by some high-end automakers to provide a more comfortable driving experience and adjustable suspension height. Airbag suspensions are also widely used in the off-road and crossover SUV segment. This suspension system allows you to adjust the air pressure of the airbags to change the vehicle's suspension height and improve off-road performance. With the rise of electric vehicles, some electric vehicle manufacturers have also started exploring the use of airbag suspensions in electric vehicles. This helps to improve ride comfort in electric vehicles and improves aerodynamics by adjusting the suspension height. Airbag suspension systems typically have adjustable height and stiffness. This allows the driver to choose a higher suspension height (e.g. for off-road trails) or a lower suspension height (e.g. for motorway driving to improve aerodynamics) as required. As automotive technology evolves, some airbag suspension systems also integrate intelligent control technology. These systems can monitor vehicle conditions in real time via sensors and automatically adjust suspension settings to provide optimum handling and comfort.
