## Abstracts

According to our (Global Info Research) latest study, the global Suspension Control Modules market size was valued at US\$ 4033 million in 2025 and is forecast to a readjusted size of US\$ 6972 million by 2032 with a CAGR of 8.1% during review period.

In 2025, global Suspension Control Module output reached about 70 million unit and global capacity of around 110 million unit. The average price is about USD 56 per unit, with gross margins near 27%. Suspension Control Modules (SCMs) are electronic control units (ECUs) used in modern vehicles to manage and optimize suspension system performance in real time by processing data from various sensors (such as wheel speed, body acceleration, steering angle, and ride height sensors) and adjusting actuators like adaptive dampers, air springs, or active anti-roll bars. They are a core component of advanced chassis control systems, enabling features such as adaptive suspension, active ride control, and vehicle stability enhancement for improved comfort, handling, and safety. The supply chain of SCMs spans multiple layers: upstream includes semiconductor suppliers (MCUs, power ICs, sensors), PCB and electronic component manufacturers, and software/algorithm providers; midstream consists of Tier 1 automotive electronics suppliers that design and integrate the control modules (including hardware, embedded software, and system validation); downstream includes automotive OEMs that integrate SCMs into vehicle platforms (passenger cars, SUVs, EVs, and luxury vehicles), followed by end users across automotive markets, with increasing linkage to autonomous driving and vehicle dynamics control ecosystems.
