According to our (Global Info Research) latest study, the global Sustainable Energy Solutions market size was valued at USD 127540 million in 2023 and is forecast to a readjusted size of USD 233230 million by 2030 with a CAGR of 9.0% during review period.

Fossil fuels (e.g. coal, natural gas and oil) are not only harmful to the planet when burned daily for energy, but they're also unsustainable as finite resources. Sustainability refers to the concept that all people can meet their basic needs infinitely, without compromising future generations. Sustainability in terms of energy embraces the same principles.

Sustainable energy includes any energy source that cannot be depleted and can remain viable forever. It does not need to be renewed or replenished; sustainable energy meets our demand for energy without any risk of going bad or running out. This is why sustainable energy is the answer to our energy needs.

Furthermore, sustainable energy doesn't harm the environment (or at most, there is a minimal risk), increase climate change or cost a heavy price. Although there is a cost associated with creating and building ways to capture sustainable energy, the energy sources themselves are typically free.

Examples of sustainable energy sources include wind, solar and water (hydropower). All of which can be considered inexhaustible and widely available to almost everyone. Geothermal energy can also be included as a sustainable alternative energy source. Geothermal energy creates usable energy from the planet's internal energy sources,

such as geysers.

Global key players of Sustainable Energy Solutions include China Three Gorges Corporation, Vattenfall AB, Iberdrola, Enel, etc. The top four players hold a share over 35%. Europe is the largest market, has a share about 32%, followed by North America, and China, with share 28% and 26%, separately. In terms of product type, Hydro Energy is the largest segment, occupied for a share of 62%, and in terms of application, Industrial has a share about 40%.
