According to our (Global Info Research) latest study, the global Sustained Release Excipients market size was valued at USD 1099.9 million in 2023 and is forecast to a readjusted size of USD 1524.7 million by 2030 with a CAGR of 4.8% during review period.

This report mainly focuses on sustained release excipients market. These medications prolong the medication's release from a tablet or capsule so that you'll get the medication's benefits over a longer period of time.

Factors for market growth include increasing benefits over traditional dosage forms and antibiotic resistance. One of the major challenges pharmaceutical marketers face is patient compliance. When a drug needs to be taken multiple times a day, patient acceptance of the drug can be greatly reduced, with the risk of suboptimal treatment outcomes. In such cases, the standard solution to improve drug acceptance is to formulate the drug in a dosage form that releases the active ingredient stably over an extended period of time. The sustained-release profile allows for customized dosing of the active ingredient over an extended period of time, up to 24 hours. Common approaches to achieve this release rate are through the use of film coatings, ER matrices, or ER-loaded granules. This extended-release formulation has gained considerable attention in the pharmaceutical industry and is expected to continue to be an important tool in improving the patient experience with existing and new drugs.
