## Abstracts

The global SVC-SVG Pure Water Cooling System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

SVC (Static Var Compensator) and SVG (Static Var Generator) are devices used in power systems to regulate voltage and reactive power. The equipment is used to provide cooling for SVG and SVC products that generate functional heat during operation. The cooling pure water (deionized water) is used to absorb the heat of the load (module) watercourse and transport it to the water-air heat exchanger to transfer the heat to the forced air, thus maintaining the load at the set temperature, and it has the features of compact structure, low noise and low energy consumption.
