Abstracts

Swan-Ganz catheter is a tool for pulmonary artery pressure (PAP) and pulmonary capillary wedge pressure (PCWP) measurements. The total length is 110cm, each 10cm has a scale, the air bag is about 1mm from the top of the catheter, can be filled with 0.8-1ml air or carbon dioxide gas, the diameter of the inflated air bag is about 13mm, the catheter tail is connected with a switch to inflate or deflate the air bag. There is a cavity opening at the top of the catheter for pulmonary artery pressure monitoring. This is a double-cavity cardiac catheter. The three-chamber tube is located about 30cm from the top of the catheter and has another cavity opening for right atrial pressure monitoring. If a thermistor probe is added 4cm from the top, the cardiac output can be measured, and this is a complete four-chamber balloon floating catheter.

According to our (Global Info Research) latest study, the global Swan-Ganz Catheter market size was valued at US\$ 52.9 million in 2023 and is forecast to a readjusted size of USD 73 million by 2030 with a CAGR of 4.8% during review period.

In recent years, the Swan-Ganz catheter market has seen a steady growth due to the increasing demand for accurate hemodynamic monitoring in critical care settings.
