## Abstracts

The global Swan-Ganz Catheter market size is expected to reach \$ 93.55 million by 2032, rising at a market growth of 3.8% CAGR during the forecast period (2026-2032).

The Swan-Ganz Catheter is an invasive pulmonary artery catheter designed by Jeremy Swan and William Ganz for continuous or intermittent hemodynamic monitoring. It is typically inserted via the internal jugular or femoral vein, passing through the right atrium and right ventricle to reach the pulmonary artery. Features include a floating balloon port, a multi-lumen design, and thermodilution cardiac output measurement capabilities. It can be used to measure pulmonary artery pressure (PAP), cardiac output (CO), right ventricular ejection fraction (RVEF), right ventricular end-diastolic volume (RVEDV), and mixed venous oxygen saturation (SvO<sub>2</sub>). The Swan-Ganz catheter is widely used in intensive care, cardiac surgery, and clinical monitoring and treatment guidance for patients with complex cardiovascular conditions, helping to assess cardiopulmonary function, fluid management, and drug efficacy. In 2025, global production of Swan-Ganz Catheters is projected to reach approximately 542,500 units, with an average ex-factory price of approximately US\$128.9 per unit. Retail prices range from US\$96.85 to US\$1599 per unit depending on configuration, with gross margins of approximately 35% to 55%.

The Swan-Ganz catheter, a typical implementation of the pulmonary artery catheter (PAC), has undergone several generations of technological iterations since its introduction and widespread application by Swan and Ganz in the 1970s: the first generation used intermittent thermodilution to measure cardiac output; the second generation introduced a hot wire to achieve automatic continuous thermodilution; and the third generation combined continuous thermodilution with pulse wave analysis to provide richer hemodynamic data. Each generation of products can expand parameter

measurements, such as continuously mixed venous oxygen saturation, right ventricular ejection fraction, end-diastolic volume, and right ventricular pressure, providing important clinical evidence for cardiopulmonary function assessment, fluid management, and treatment decisions in critically ill patients. The Swan-Ganz catheter has long been considered a high-value medical consumable in clinical monitoring and maintains a core monitoring position in ICUs, operating rooms, and specialized interventional units. Swan-Ganz PAC products still hold a major market share, with widespread applications in critical care monitoring and complex cardiac surgery, particularly in cardiopulmonary intensive care and intraoperative hemodynamic management, where demand continues to rise. Market growth is driven by factors such as the increasing global burden of cardiovascular disease, a growing aging population, higher ICU occupancy rates, and more complex cardiac surgeries. Technological advancements, such as less invasive designs, data connectivity, and intelligent monitoring capabilities, are also driving market expansion. The primary market opportunity stems from the high incidence of cardiovascular disease and the growing demand for intensive care. As clinicians increasingly rely on continuous, accurate hemodynamic data, the Swan-Ganz catheter is gaining attention for its ability to provide comprehensive physiological data, particularly in complex cardiac surgeries, shock management, and pulmonary hypertension diagnosis. Furthermore, improvements in healthcare infrastructure and the development of intensive care systems in the Asia-Pacific region are also contributing to future growth. Product innovation trends include more minimally invasive, intelligent, and integrated PAC designs, such as integrated sensors, digital data visualization, and remote monitoring capabilities, which will further expand product applicability and clinical value. Despite market growth, several challenges remain. One is the risk and operational complexity of invasive monitoring, leading some hospitals to favor non-invasive or semi-invasive alternatives. Secondly, the rapid development of non-invasive hemodynamic monitoring technologies (such as bioimpedance and wearable sensor technology) has provided sufficient data support in some mild to moderate cases, thus putting pressure on the demand for traditional PACs. Thirdly, factors such as market competition, medical expense reimbursement policies, and centralized procurement systems may compress the price space of high-end PACs, requiring manufacturers to maintain profit margins through technological barriers, product differentiation, and service support. Looking ahead, the Swan-Ganz catheter market will continue to develop along the lines of intelligence, digitalization, and clinical integration. Connecting high-end PACs with monitoring platforms can improve clinical monitoring efficiency, reduce complications, and improve patient outcomes, thereby increasing product attractiveness. With increased healthcare spending and faster technology adoption in emerging economies, the Asia-Pacific region is expected to be the fastest-growing regional market. Despite the emergence of alternative

technologies, invasive high-precision monitoring remains a crucial component of critical care management, which will support the steady growth of Swan-Ganz catheters in the coming years.

This report studies the global Swan-Ganz Catheter production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Swan-Ganz Catheter and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Swan-Ganz Catheter that contribute to its increasing demand across many markets.

### **Highlights and key features of the study**

Global Swan-Ganz Catheter total production and demand, 2021-2032, (K Units)

Global Swan-Ganz Catheter total production value, 2021-2032, (USD Million)

Global Swan-Ganz Catheter production by region & country, production, value, CAGR, 2021-2032, (USD Million) & (K Units), (based on production site)

Global Swan-Ganz Catheter consumption by region & country, CAGR, 2021-2032 & (K Units)

U.S. VS China: Swan-Ganz Catheter domestic production, consumption, key domestic manufacturers and share

Global Swan-Ganz Catheter production by manufacturer, production, price, value and market share 2021-2026, (USD Million) & (K Units)

Global Swan-Ganz Catheter production by Type, production, value, CAGR, 2021-2032, (USD Million) & (K Units)

Global Swan-Ganz Catheter production by Application, production, value, CAGR, 2021-2032, (USD Million) & (K Units)

This report profiles key players in the global Swan-Ganz Catheter market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Edwards Lifesciences (BD), ICU Medical, Argon Medical Devices, Biopital International (Formerly Biosensors International), etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

### **Detailed Segmentation:**

Each section contains quantitative market data including market by value (US\$ Millions), volume (production, consumption) & (K Units) and average price (US\$/Unit) by manufacturer, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.

**Key Questions Answered:**

1. How big is the global Swan-Ganz Catheter market?
2. What is the demand of the global Swan-Ganz Catheter market?
3. What is the year over year growth of the global Swan-Ganz Catheter market?
4. What is the production and production value of the global Swan-Ganz Catheter market?
5. Who are the key producers in the global Swan-Ganz Catheter market?
6. What are the growth factors driving the market demand?
