According to our (Global Info Research) latest study, the global Sweet Corn Seed market size was valued at US\$ 834 million in 2024 and is forecast to a readjusted size of USD 1031 million by 2031 with a CAGR of 3.1% during review period.

The corn seed is a propagator with a capacity to grow into maize, which is formed by pollination and fertilization.

Sweet corn is a variety of maize with high sugar content. Sweet corn is the result of a naturally occurring recessive mutation in the genes which control conversion of sugar to starch inside the ENO of the corn kernel. Unlike field corn varieties, which are harvested when the kernels are dry and mature (dent stage), sweet corn is picked when immature (milk stage) and prepared and eaten as a vegetable, rather than a grain. Since the process of maturation involves converting sugar to starch, sweet corn stores poorly and must be eaten Fresh, canned, or frozen, before the kernels become tough and starchy.

Global Sweet Corn Seed key players include Monsanto, DuPont Pioneer, Syngenta, KWS, Dow AgroSciences, etc. Global top five manufacturers hold a share about 80%.

North America is the largest market, with a share about 45%, followed by Africa, and Europe, both have a share over 30 percent.

In terms of product, GMO is the largest segment, with a share about 95%. And in terms of application, the largest application is Farm Planting, followed by Personal Planting.
