## Abstracts

The global Swept Volume Volumetric Display market size is expected to reach \$ 522 million by 2032, rising at a market growth of 10.0% CAGR during the forecast period (2026-2032).

A scanning volumetric display device is a display apparatus capable of directly generating visible volumetric images in three-dimensional space. Through a high-speed rotating or reciprocating display surface, an optical scanning system, and a control and drive module, two-dimensional images are scanned and superimposed layer by layer to form a complete three-dimensional visual effect in space. This device allows for multi-view observation without the need for stereoscopic glasses and is widely used in scientific visualization, industrial design, medical imaging, military simulation, and public displays, providing users with a highly realistic and interactive three-dimensional visual experience.

The scanning volumetric display device industry chain is mainly divided into three segments: upstream, midstream, and downstream. The upstream segment primarily consists of high-performance optical components (lenses, mirrors, optical scanners), LED/OLED light sources, motors, sensors, and control chips, forming the core hardware foundation of the equipment. The midstream segment encompasses equipment design and manufacturing, including scanning mechanism design, optical system integration, drive control circuit development, image processing and synchronization control software integration, as well as overall assembly and testing. The downstream segment focuses on application and system integration. Products are widely used in scientific visualization, medical imaging, industrial design, military simulation, public displays, and digital art, with some devices also offering value-added services through interactive sensing, virtual simulation, and intelligent control functions.

In 2025, the average price of scanning volumetric display devices is US\$11,000 per unit, with sales of 23,727 units, total production capacity of 33,900 units, and a gross profit margin of approximately 43%.
