## **Abstracts**

According to our (Global Info Research) latest study, the global Swine Transmissible Gastroenteritis, Porcine Epidemic Diarrhea and Porcine Rotavirus Vaccine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Porcine viral diarrhea is a common and frequently-occurring disease in pigs, and the most serious pathogens are porcine transmissible gastroenteritis virus (TGEV), porcine epidemic diarrhea virus (PEDV) and porcine rotavirus (PoRV). All three pathogens can infect pigs of all ages and can cause symptoms such as vomiting, watery diarrhea and dehydration. The harm to piglets within 10 days of age is particularly serious, and the morbidity and mortality are high, up to 100%. The vaccine is inoculated at the Houhai point, and it is safe and effective for all pigs including suckling piglets and pregnant sows. It realizes the prevention of three diseases with one shot, reduces the immune stress of pigs, and reduces the labor intensity and breeding of vaccination. cost, and has a significant effect on the prevention of single infection or mixed infection of the three pathogens.
