Abstracts

The global Swine Transmissible Gastroenteritis, Porcine Epidemic Diarrhea and Porcine Rotavirus Vaccine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Porcine viral diarrhea is a common and frequently-occurring disease in pigs, and the most serious pathogens are porcine transmissible gastroenteritis virus (TGEV), porcine epidemic diarrhea virus (PEDV) and porcine rotavirus (PoRV). All three pathogens can infect pigs of all ages and can cause symptoms such as vomiting, watery diarrhea and dehydration. The harm to piglets within 10 days of age is particularly serious, and the morbidity and mortality are high, up to 100%. The vaccine is inoculated at the Houhai point, and it is safe and effective for all pigs including suckling piglets and pregnant sows. It realizes the prevention of three diseases with one shot, reduces the immune stress of pigs, and reduces the labor intensity and breeding of vaccination. cost, and has a significant effect on the prevention of single infection or mixed infection of the three pathogens.
