According to our (Global Info Research) latest study, the global Swine Vaccines market size was valued at USD 1419.1 million in 2023 and is forecast to a readjusted size of USD 1846 million by 2030 with a CAGR of 3.8% during review period.

The immune system responds by producing antibodies that destroy the infectious agents, usually in co-operation with specialised body cells or by neutralising the toxins that are responsible for the disease. This process of stimulating immunity is called vaccination.

Vaccines contain antigens from viruses, bacteria, bacterial toxins, or parasites. They are given to pigs, usually by injection, to stimulate an immune response which will protect the pigs against later natural infection with the organism from which the vaccine was derived. Most stimulate both a humoral response and a cell-mediated response.

Vaccines can either contain viable organisms that will multiply in the pig, or inactivated ones that will not multiply in the pig.

China is the largest region of Swine Vaccines, with a share more than 40%, followed by Europe and North America, etc. Merck, Boehringer Ingelheim, Jinyu Bio-Technology, CAHIC and Tecon are the top 5 manufacturers of industry, and they had a more than 55% combined market share.
