Abstracts

The global Swing Door Gate market size is expected to reach $ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

The swing door gate is a common access control equipment. Compared with the traditional three-bar gate, it adopts a swing door design. This kind of gate usually consists of a pair of doors that automatically open when passengers pass through, allowing passengers to pass, while in the event of unauthorized access, the doors will remain closed. Swing gates are usually installed at the entrances and exits of public transportation places such as subway stations and bus stations to manage the entry and exit of passengers. When used in conjunction with automatic ticket vending machines, passengers need to go through the swing gate to enter the platform or get on the train after purchasing their tickets. Passengers swipe the ticket in front of the gate or insert the ticket into the card reader. The system will identify the validity of the ticket. If the ticket is valid, the door will open and the passenger can pass; if the ticket is invalid or expired, the door will not open and the passenger will need to enter the ticket separately. deal with. The combination of swing gates and automatic ticket vending machines can effectively manage the entry and exit of passengers and improve the safety and efficiency of the transportation system. Compared with the three-bar type turnstile, the design of the swing door type turnstile is more modern and more convenient for passengers to use.
