The global Swing Motor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Swing Motor is a hydraulic motor, also known as a rotary motor or a rotary motor, mainly used to provide rotary power and drive rotary motion of mechanical devices or components, especially in crawler excavators and similar construction machinery for driving rotary platform. The Swing Motor converts hydraulic energy into mechanical energy through the hydraulic energy provided by the hydraulic system, thereby generating rotational torque and rotational motion. It usually consists of components such as plunger, slider, bent shaft and gear transmission.
