According to our (Global Info Research) latest study, the global Swing Pellet Machine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The machine consists of a feed hopper, a rotating roller, and a die. The feed material is fed into the hopper and falls onto the rotating roller, which compresses the material into the die. The swinging motion of the roller helps to improve the pelletizing efficiency by evenly distributing the material and reducing the chance of blockages.
