## Abstracts

The global Swinging Barrier Optical Turnstile market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Swinging Barrier Optical Turnstile is an access control system that allows the passage of authorized users and restricts unauthorized access. It consists of barriers that swing in one or both directions to allow or block the passage. Optical sensors are set into the barriers, and when a valid credential is presented (such as a swipe card, fingerprint, or facial recognition), the barriers swing open. If an invalid credential is presented or no credential at all, the barriers remain closed, thus preventing unauthorized entry.

Swinging barrier optical turnstiles are often used in high-security facilities, airports, train stations, and other places where access control is essential.

This report studies the global Swinging Barrier Optical Turnstile production, demand, key manufacturers, and key regions.
