According to our (Global Info Research) latest study, the global Sugar Beet market size was valued at USD 2212 million in 2023 and is forecast to a readjusted size of USD 3571.1 million by 2030 with a CAGR of 7.1% during review period.

Sugar beet is a root vegetable generally used to produce sugar. Being rich in nutrients and low in fat and calories, sugar beet is used in low calorie and reduced fat diet. Companies involved in the production of sugar using sugar beet are also using sugar beet by-product known as dried beet pulp which is left when sugar is extracted from the sliced sugar beet. This by-product is being provided in many forms such as molasses dried, pelleted, and plain dried. Manufacturers are supplying this by-product as a livestock feed. Meanwhile, beet molasses is being used for producing chemicals, yeast, and pharmaceuticals.

European Food Safety Authority (EFSA) recently cleared genetically modified sugar beet to be used in food, processing, feed imports, and for food containing ingredients produced from it. Although, it has not been authorized for cultivation within the EU. GM sugar beet is also being considered for biofuel production. Meanwhile, regulatory agencies across the world have also concluded that the white sugar whether extracted from conventional sugar beet or from biotech sugar beets is the same, with no difference in nutritional value or composition.
