According to our (Global Info Research) latest study, the global Switched Capacitor Charging Chip market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A switched capacitor charging chip is an electronic component used to manage and control the charging process of lithium batteries or other types of batteries. The switched capacitor charging chip uses the principle of switched capacitors to regulate current and voltage to achieve fast charging of the battery. Compared with traditional linear charging chips, switched capacitor charging chips have higher charging efficiency and faster charging speed. Switched capacitor charging chips usually adopt PWM (Pulse Width Modulation) or PFM (Pulse Frequency Modulation) control methods, which can realize constant current charging, constant voltage charging and other charging modes, and have overheating protection, overdischarge protection and other functions. Switched capacitor charging chips are widely used in mobile devices, smart wearable devices, portable electronic products and other fields.
