A Switchgear Online Monitoring System is an advanced, real-time system designed to continuously monitor the health and performance of switchgear in electrical power networks without requiring system shutdowns. It collects and analyzes data from critical components of the switchgear, such as circuit breakers, relays, and busbars, focusing on parameters like temperature, voltage, current, humidity, partial discharge, and insulation quality. By offering real-time diagnostics and alerts for potential failures or malfunctions, the system helps prevent unexpected outages, improves operational efficiency, extends equipment lifespan, and enhances overall safety. Online monitoring systems are particularly useful in critical infrastructure such as power plants, substations, and industrial facilities, where uninterrupted power supply and reliability are essential.
