Abstracts

The global Synchronous FIFOs market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Synchronous FIFOs are a type of data buffer, where the first byte to arrive at the input is the first to leave at the output. In a computer system, the operating system's algorithm schedules CPU time for each process according to the order in which it is received. A synchronous FIFO will queue the data and release it in a sequential fashion.

This report studies the global Synchronous FIFOs production, demand, key manufacturers, and key regions.
