According to our (Global Info Research) latest study, the global Synchronous Reluctance (SynRM) Motors market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Synchronous Reluctance (SynRM) Motors are synchronous motors that work by utilizing the unequal reluctance in the direct-axis and quadrature-axis directions of the rotor to generate reluctance torque. Synchronous reluctance motors have simple technology, low material cost, and are widely used.

In recent years, it has been considered as a viable alternative to induction motors due to its robust construction, cost penalty and maintenance. The motor runs at synchronous speed due to the magnetic locking between the stator and rotor fields. In terms of performance, it offers fast dynamic response, higher efficiency, power density and torque.
