The global Synchronous Reluctance (SynRM) Motors market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Synchronous Reluctance (SynRM) Motors are synchronous motors that work by utilizing the unequal reluctance in the direct-axis and quadrature-axis directions of the rotor to generate reluctance torque. Synchronous reluctance motors have simple technology, low material cost, and are widely used.

In recent years, it has been considered as a viable alternative to induction motors due to its robust construction, cost penalty and maintenance. The motor runs at synchronous speed due to the magnetic locking between the stator and rotor fields. In terms of performance, it offers fast dynamic response, higher efficiency, power density and torque.

This report studies the global Synchronous Reluctance (SynRM) Motors production, demand, key manufacturers, and key regions.
