Abstracts

The global Synchrophasor market size is expected to reach \$ 2300 million by 2032, rising at a market growth of 23.7% CAGR during the forecast period (2026-2032).

A synchrophasor is a time-synchronized measurement of a quantity described by a phasor. Like a vector, a phasor has magnitude and phase information. Devices called phasor measurement units (PMU) measure voltage and current and with these measurements calculate parameters such as frequency and phase angle. It provides real-time data of the grid system to operators, helping them make decisions to prevent any power outage. The measurements obtained from synchrophasor are used to improve grid visualization, operational monitoring, power system control, stability monitoring, state estimation, and fault analysis. Each measurement taken by a synchrophasor is time-stamped according to a common time reference. This enables synchrophasor from different utilities to be combined and synchronized, which presents a comprehensive view of a regional interconnection.

Schweitzer Engineering Laboratories, ABB, Siemens Energy and Beijing Sifang Automation captured the Top 4 revenue share spots in the Synchrophasor market in 2019. Schweitzer Engineering Laboratories dominated with 16.19% revenue share, followed by ABB with 15.68%, Siemens Energy with 11.41% and Beijing Sifang Automation with 10.71%.
