Synthetic Aperture Radar In Space market refers to the space and air-based SAR that functions on the principle of transmission and reception of the reflected signals that interact with the ground and aid in the imaging, tracking, detection and characterization. SAR finds significant applications over the conventional electro optical (EO) imaging systems, primarily owing to microwaves being able to penetrate through clouds and provide consistent 24 hour, all weather data efficiency.

According to our (Global Info Research) latest study, the global Synthetic Aperture Radar In Space market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Increasing traction of UAVs and UCAVs is expected to present considerable market traction through the forecast period
