According to our (Global Info Research) latest study, the global Synthetic Blocking Reagent market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The Synthetic Blocking Buffer, Blotting is a ready-to-use solution for blocking of the remaining free binding sites after coating or transfer of biomolecules to a membrane. The buffer blocks all potential binding sites of nonspecific interaction and reduces the background signal. The Synthetic Blocking Buffer, Blotting eliminates the risk of false positive reactions in the assay, while avoiding the current safety hazards related to the use of bovine biological material, for instance BSA.
