Abstracts

The global Synthetic Blocking Reagent market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The Synthetic Blocking Buffer, Blotting is a ready-to-use solution for blocking of the remaining free binding sites after coating or transfer of biomolecules to a membrane. The buffer blocks all potential binding sites of nonspecific interaction and reduces the background signal. The Synthetic Blocking Buffer, Blotting eliminates the risk of false positive reactions in the assay, while avoiding the current safety hazards related to the use of bovine biological material, for instance BSA.

This report studies the global Synthetic Blocking Reagent production, demand, key manufacturers, and key regions.
