Abstracts

Dye is a colored substance that has an affinity to the substrate to which it is being applied. Dyes are applied in an aqueous solution, and may require a mordant to improve their fastness on the fiber. Pigments are substances that impart black, white or a color to other materials, especially in a powdered substance that is mixed with a liquid in which it is relatively insoluble, and are used specially to impart color to coating materials (as paints) or to inks, plastics and rubber. Chlorophyll, Carotenoid, Phycobilin and Melanin are some pigments.
