The global Synthetic Ester High Temperature Gear Oil market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Synthetic Ester High Temperature Gear Oil is refined by thickening synthetic lubricating oil with polyurea thickener, adding antirust agent, extreme pressure additive and structure improver. The operating temperature range is -20?+250?. It has special high temperature and long-lasting lubrication ability. Nano extreme pressure additives are added to the product, which are evenly distributed on the lubricating surface along with the grease, so that the gears can operate normally under high temperature and heavy load working environment without sintering or jamming, and can still maintain the gear in wet, water and dusty environments. Perfect lubrication.
