## Abstracts

According to our (Global Info Research) latest study, the global Synthetic Fiber Sling market size was valued at USD 362.6 million in 2023 and is forecast to a readjusted size of USD 425.1 million by 2030 with a CAGR of 2.3% during review period.

Synthetic fiber slings can be made from polyester, nylon, or high-performance materials and are lightweight, easy to rig, and extremely flexible. Besides, synthetic Fiber Sling has the advantages of light portability, easy maintenance and good chemical resistance. There are two types of synthetic fiber slings: web Slings and round slings. Web Slings are flexible, lightweight, and have a flat construction, normally with eyes at both ends. The flexibility of the sling helps to reduce shock loading effects. It is also important to note that the load-bearing yarns of the sling come in direct contact with the load. Round slings, however, are a continuous loop of yarn covered by a woven tubular casing. This casing comes in direct contact with the load, which helps to protect the load-bearing yarns inside.

Synthetic Fiber Sling has the advantages of light portability, easy maintenance and good chemical resistance. Globally, the main manufacturers of Synthetic Fiber Sling include Juli Sling Co. Ltd, Cortland Company and Gostern Rigging Co. Ltd. Among them, Juli Sling Co. Ltd has the largest market share of approaching 15%. China is the largest market, holds a share over 35%.
