It takes high purity caustic calcined magnesite and dolomite powder as raw material, milling, formed under high pressure, sintered in high temperature rotary kiln. It has the feature of high density, high strength and high corrosion resistance and is the ideal raw material for making dry ramming mix and hot patching material for bottom of EAF.

Scope of the Report:

This report focuses on the Synthetic Magnesium Oxide in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Magnesium oxides are used for the production of magnetic steel sheets. A Slurry of MgO is prepared and is used to coat steel and the coated sheets are submitted to high temperature. The reaction of the magnesium with the silicon steel leads on the surface to a specific structure called "Forsterite". This structure gives specific magnetic properties to the silicon steel.

The worldwide market for Synthetic Magnesium Oxide is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
