Scope of the Report:

The production process of adipic acid releases large amounts of nitrous gases, which are highly toxic and harmful to the environment. It is manufactured through the reaction of a mixture of cyclohexanone and cyclohexanol, called ketone alcohol oil, with nitrous compounds. This aspect of the synthetic adipic acid market is hampering its growth and leading to improved prospects for bio-based adipic acid, the production process of which doesn't cause harm to the environment and is also more cost-effective than synthetic adipic acid. Some of these techniques include direct oxidation of cyclohexane, oxidation of benzene, and biosynthesis.

The worldwide market for Synthetic and Bio-Based Adipic Acid is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.

This report focuses on the Synthetic and Bio-Based Adipic Acid in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.
