Abstracts

Synthetic pyrethroids are analogues of the natural pyrethrins and have a broad spectrum of activity against external parasites (flies, ticks, mites, fleas, lice, mosquitoes, etc.). The insecticidal properties of pyrethrins are derived from ketoalcoholic esters of chrysanthemic and pyrethroic esters of chrysanthemic and pyrethroic acids.

Scope of the Report:

This report focuses on the Synthetic Pyrethroids in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

In the world wide, synthetic pyrethroids (TC) manufactures mainly distribute in China and India. China has the largest production in the world and exports worldwide, like Yangnong Chemical and Jiangsu RedSun, both have large production capacity. As to western countries, the companies there usually import synthetic pyrethroids (TC) for the manufacture of pesticides and insect repellent.

All manufactures in the world are committed to the improvement of product.

International companies have been leading the R&D level in the past. These two years, some Chinese manufactures can almost catch up with the world's leading technology too.

Just few manufacturers can produce intermediate. And these manufacturers which have complete industrial chain have certain advantages in the cost of raw materials.

The worldwide market for Synthetic Pyrethroids is expected to grow at a CAGR of roughly 4.7% over the next five years, will reach 2230 million US\$ in 2023, from 1690 million US\$ in 2017, according to a new GIR (Global Info Research) study.
