## Abstracts

The global Synthetic Spider Silk market size is expected to reach \$ 204 million by 2032, rising at a market growth of 31.7% CAGR during the forecast period (2026-2032).

Spider silk is among the strongest known biomaterials. It is the silk used for the framework of the web and it is used to catch the spider if it falls. As such, it is stronger and much more flexible than KEVLAR®. Due to its incredible mechanical properties, spider silk is being considered for use as a new biomaterial for drug delivery and tendon and ligament replacement/repair, as well as athletic gear, military applications, airbags, and tire cords. However, spiders cannot be farmed for their silk as they are cannibalistic and territorial. The most reasonable alternative for producing spider silk fibers is to utilize genetic engineering to produce the proteins in a foreign host and then spin fibers from the synthetic protein.

At present, only four companies have realized the commercial production, Bolt Threads, Kraig Biocraft Laboratories, Spiber and AMSilk.

This report studies the global Synthetic Spider Silk production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Synthetic Spider Silk and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Synthetic Spider Silk that contribute to its increasing demand across many markets.
