According to our (Global Info Research) latest study, the global T-Con Board market size was valued at US\$ 2508 million in 2024 and is forecast to a readjusted size of USD 3335 million by 2031 with a CAGR of 4.2% during review period.

A T-Con board is responsible for generating the horizontal and vertical timing panel signals as well as providing panel bias and enabling signals. It controls the logic signal of gate and serves as a source for driving the thin-film transistor (TFT) liquid crystal display (LCD).

A standalone TCON chip is a device that helps control the timing and synchronization of image data between different components in a display system. It is very important to ensure that the image displayed on the screen is properly aligned and free from any visible artifacts. The growing demand for miniaturization of electronic devices, the increasing use of these chips in displays manufactured by major brands, the growing trend of using advanced semiconductor technologies in automotive electronics, the growing demand for high-speed data transmission and the growing popularity of digital entertainment Also contributed to regional growth.
