## Abstracts

According to our (Global Info Research) latest study, the global Tabless Design Battery market size was valued at US\$ 158 million in 2024 and is forecast to a readjusted size of USD 313 million by 2031 with a CAGR of 10.4% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The maximum current transmission distance of Tabless design batteries is the height of the electrode rather than the length. The electrode height is usually 5%-20% of the electrode length. Therefore, the resistance is reduced by 5-20 times compared to a single-pole ear, thereby improving the transmission efficiency and greatly improving the battery's rate performance.
