## Abstracts

The global Tablet and Capsule Inspection System market size is expected to reach \$ 5274 million by 2032, rising at a market growth of 7.6% CAGR during the forecast period (2026-2032).

In 2025, global sales of tablet and capsule inspection systems reached 36,000 units, with an average selling price of \$85,000. Tablet and capsule inspection systems are intelligent devices used on pharmaceutical production lines to automatically detect and reject solid dosage forms for appearance defects, size and weight, breakage and cracks, color differences, contamination, and abnormal filling amounts. They typically combine high-speed vision cameras, AI algorithm software, precision conveying mechanisms, and light source systems to achieve online non-destructive testing and data traceability, and are widely used in the end-of-line quality control of pharmaceutical GMP production lines. Upstream raw materials mainly include industrial cameras, CMOS sensors, stainless steel frames, PLC controllers, servo motors, optoelectronic components, and algorithm software modules. Downstream customers are mainly pharmaceutical companies, CDMO factories, and health supplement manufacturers. Future growth prospects lie in AI deep learning inspection, cloud-based quality management, and high-speed automated upgrades. Global total production capacity is approximately 45,000 units per year, with an average gross profit margin of approximately 38%-45%. With the increasing demand for drug consistency evaluation, unmanned factories, and high-end generic drug production, equipment upgrades are accelerating. The expansion of emerging pharmaceutical production capacity in Asia and the domestic substitution of high-end vision inspection technologies are bringing continuous demand and business opportunities.
