Tablet Printing Inspection Machine is a specialized and highly precise device mainly utilized in the pharmaceutical industry. It is engineered to conduct comprehensive inspections on tablets that have undergone the printing process. Incorporating advanced high - precision optical detection systems and intelligent image - processing software, this machine can swiftly and accurately recognize the printed content on the tablet surface, such as text, patterns, and colors. It is capable of detecting the clarity of printing, identifying issues like blurring, missing prints, or double - printing to ensure the quality of the printing. Moreover, it can examine whether the printing colors meet the preset standards, determining if the color deviation is within the acceptable range. Additionally, it precisely judges the accuracy of the printing position to confirm if the printed information on the tablet is in the correct location, thereby guaranteeing the consistency and standardization of tablet printing quality and effectively preventing non - conforming products from entering the market.
