Abstracts

The global TaC Coated Graphite Susceptor market size is expected to reach \$ 166 million by 2032, rising at a market growth of 15.7% CAGR during the forecast period (2026-2032).

TaC coated graphite susceptor is prepared by wet ceramic process, and it is made by coating tantalum carbide on high-purity graphite substrate, which has high purity, excellent thermal stability and thermal conductivity. At present, it is mainly used in processes such as epitaxy, single crystal growth, and MOCVD. The excellent thermal conductivity and stability of graphite make it a good advantage as the basic component of MOCVD equipment.

Key manufacturers of TaC Coated graphite susceptors include Momenite Technologies, Tokai Carbon, TOYO TANSO, and ACME. Momenite Technologies stands as the world's largest manufacturer in this sector, holding a market share exceeding 70%.

In terms of product application, TaC coatings on graphite are currently utilized primarily on graphite components?such as graphite crucibles and susceptors?to facilitate smooth coating and uniform heating of wafers. The primary process stages within end-use applications involve SiC single-crystal growth and SiC/GaN epitaxy (with epitaxy currently representing the mainstream application). TaC-coated graphite components are characterized by their high technological sophistication and elevated production costs; consequently, overall market demand for these products remains lower than that for CVD SiC.
