According to our (Global Info Research) latest study, the global Tactical Engagement Simulation System (TESS) market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Tactical Engagement Simulation System (TESS) is a virtual simulation system used for military training and tactical exercises. Such systems usually include simulated weapons, equipment and environments to train soldiers to conduct counter-terrorism, attack and defense, rescue and other operations in actual combat scenarios. The TESS system can provide a highly realistic virtual battlefield environment, allowing soldiers to conduct real-time military operations in simulated scenarios to improve their ability to cope with complex combat environments.

TESS systems usually include components such as virtual reality (VR) technology, simulation engines, network connections, and data collection, allowing participants to interact with the virtual environment and record and analyze their behaviors and decisions. By using the TESS system, the military can conduct effective training and exercises without actual combat to improve soldiers' tactical skills and ability to cope with combat stress.
