## Abstracts

According to our (Global Info Research) latest study, the global TAD Tissue Machines market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

TAD is the acronym for Through Air Drying. The TAD process used in tissue manufacturing was developed by P&G, Kimberly-Clark, and Scott. TAD was first used commercially in the 1960's in the manufacturing of tissue and towel products.

The TAD process is used to dry tissue and towel products efficiently while also maintaining softer, bulkier, and more absorbent properties. Conversely, the traditional wet-pressing method is used for conventional papermaking in other sectors.

In the TAD process, the paper web is transferred from the forming section of the paper machine to a specially designed through-air-drying fabric or belt. That belt is permeable, allowing hot air to pass through it and interact with the paper web. This hot air causes the paper fibers to expand, creating a bulkier and softer product compared to traditional drying methods.

The Global Info Research report includes an overview of the development of the TAD Tissue Machines industry chain, the market status of Towel Product (2800mm, 3600mm), Bath Product (2800mm, 3600mm), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of TAD Tissue Machines.
