According to our (Global Info Research) latest study, the global Tailgate Detection Imaging Measurement System market size was valued at US\$ 10.8 million in 2024 and is forecast to a readjusted size of USD 13.3 million by 2031 with a CAGR of 3.1% during review period.

Tailgating, also known as piggybacking, is one of the most common forms of a security breach, where an unauthorized entity passes through an access control point, either accidentally or by purpose, behind an authorized user. Access to unauthorized personnel in the facility exposes the organization to operational hazards and puts people's safety at risk. A tailgate detection system is an additional layer of security measure, deployed at access control points to detect tailgating incidences.

The imaging measurement system is a software-based tailgate detecting system that uses advanced video analytics capabilities for detecting tailgate. The system can identify the tailgate of a person and a vehicle. When the tailgate is detected by the system, video footage of the incident is captured by the system, and an alarm is triggered to inform the security personnel of the facility.
