The global Tailgate Drive market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The tailgate drive is a component of the tailgate system of the vehicle, which is used to open and close the tailgate. The tailgate is a hinged panel at the rear of the vehicle that provides access to the cargo area. In some vehicles, the tailgate is powered by a motor and the tailgate drive system operated by a switch or button. Depending on the vehicle type and the specific requirements of the tailgate system, the tailgate driver can have different forms and designs. Some tailgate drivers use a cable system to move the tailgate, while others use a scissor-type hoist or other type of mechanism. No matter what design is adopted, the tailgate drive device is an important part of the electric tailgate system, which can operate the tailgate conveniently and reliably.
