According to our (Global Info Research) latest study, the global Taletrectinib Adipate market size was valued at US\$ 46.30 million in 2025 and is forecast to a readjusted size of US\$ 436 million by 2032 with a CAGR of 25.2% during review period.

Taletrectinib Adipate is an oral, highly selective small molecule tyrosine kinase inhibitor and a new generation of antineoplastic agent targeting ROS1 and NTRK fusion genes. It exerts potent antitumor activity by selectively inhibiting ROS1 and NTRK kinase activities, blocking downstream signaling pathways involved in tumor cell proliferation, differentiation and metastasis. It demonstrates significant inhibitory activity against crizotinib-resistant mutations such as ROS1 G2032R. It is mainly indicated for the treatment of ROS1-positive advanced or metastatic non-small cell lung cancer and NTRK fusion-positive solid tumors, characterized by strong antitumor activity, excellent central nervous system penetration and broad coverage of resistant mutations. In 2025, global taletrectinib adipate (brand name Ibtrozi) production reached approximately 120,000–150,000 bottles.

Taletrectinib adipate demonstrates significant market competitiveness in the global treatment of ROS1 and NTRK fusion-positive tumors owing to its excellent target selectivity, potent intracranial antitumor activity, and favorable control over drug-resistant mutations. With the popularization of precision medicine and genetic testing, the clinical demand for such targeted drugs continues to rise. By virtue of its superior efficacy and safety compared with first-generation products, taletrectinib adipate has gradually become an important option for the treatment of advanced non-small cell lung cancer and solid tumors. Driven by policy support at home and abroad, the advancement of medical insurance access, and global commercialization layout, its

market coverage has been continuously expanded and patient accessibility steadily improved. The overall market shows a steady growth trend, with broad application prospects and promising market potential in both first-line and post-resistance treatment settings.
