Abstracts

The global Tandem Axle Cable Hoist market size is expected to reach \$ 1400 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

Tandem axle cable hoist is a heavy-duty cable loading system mounted on a double-axle chassis truck, designed for loading and unloading various types of sliding containers (such as roll-off garbage bins, waste bins, etc.). Its core working principle is to connect the cable drum to the front end of the container through a high-strength steel cable, and to achieve the traction, lifting and placement of the container under hydraulic drive. The equipment is often equipped with a retractable tail roller, guide rails and automatic locking mechanism to ensure smooth movement and accurate positioning of the container during loading. The double-axle configuration provides higher carrying capacity and traction stability, suitable for transporting large or high-load waste bins, and is widely used in scenarios such as urban waste treatment, construction waste transportation and industrial waste transfer. It has a sturdy structure and easy maintenance. It can carry containers of various sizes and specifications, improves the flexibility and efficiency of vehicle use, and is one of the key equipment in modern solid waste logistics systems.
